MORE STORIES FROM THE USERS OF SERRAPEPTASE, THE WONDER ENZYME CHANGING HEALTH CARE

Naturally Healthy Publications brings you more amazing stories from the users of Serrapeptase. In the last newsletter we concentrated on professionals using it. In this edition we are bringing you stories from the everyday users of it. Serrapeptase is so safe that

the public are just happy to have a powerful treatment tool for effective self treatment, without the constant worry about side effects from high doses (when necessary). The range of different conditions that respond continues to grow and some of them are so rare, with no

chance of a treatment from the orthodox system. One such condition, Wegener's Granulomatosis, is a particularly nasty condition, but we now have a very grateful lady who feels she at least has a chance of life. Please keep your stories coming.

Asthma Study - Effect of expectorants on relaxation behaviour of sputum viscoelasticity in vivo. Shimura S, Okubo T, Maeda S, Aoki T, Tomioka M, Shindo Y, Takishima T, Umeya K.

One of the difficult things to understand with Serrapeptase is that so many studies have been done with lung and chest problems, but still no real interest in it for such specific uses. The asthma study referred to above shows significant improvement taking Serrapeptase, all with no side effects. Instead of taking more and more drugs, Serrapeptase and other sensible nutrients could be rescuing people from a life of misery. The list of studies for lung diseases is impressive, but the success stories coming in for other lung conditions (asbestosis, miners and farmers lung etc.) show that not enough studies are being done. Why is this? Governments and universities have a public duty to give people drug-free health care. Drug treatment is not health care, only nutrients, lifestyle changes and other proven alternative treatments can create health care. The current drug, medical care regime is failing, not because of shortage of money, but because it is based upon a false premise that drugs are good for your health.

Dog Arthritis Story

Mr Rich was introduced to Serrapeptase two years ago when his 13-year-old bitch was unable to walk and the drugs could do no more. Within a few weeks of taking it she was up and walking again. Now two years later at aged 15 she is still being kept mobile, safely without drugs and at a cheaper cost.

Horse Serrapeptase Story

In your newsletter, you have asked for feedback about Serrapeptase. I am delighted to give you mine. I used Serrapeptase on my horse, which sustained a severe tendon injury in April 2003. By June a scan showed that he had a chronic tendinitis with much scar tissue

SERRAZYME CASE STUDIES The following users of Serrapeptase are very happy to share their success with others

Interviews by Writer, Jenny Pulling

"I now feel brilliant. Everything has improved. Since last June I have had no relapses. The tightness in my spine that indicates the presence of MS has gone, as have the constant pins and needles in my fingers. My balance has improved and what is perhaps best of all, the old confident pre MS me has returned."

Maureen Rooney

"I'm so glad I heard that programme. I bought myself a tub and after two weeks the pain lessened."

Eileen Malone

"We were amazed by its power in dispersing two cysts, one on her back and one on her breast"

Mr & Mrs Jones

MS Multiple Sclerosis - Maureen Rooney

Not so long ago Mrs Maureen Rooney threaded a needle and sewed on a button. So what? I hear you say. In fact, this was a huge achievement in her 16-year battle against MS. It has involved years of dedication to a health regime. Every week Mrs Rooney undergoes hyperbaric oxygen treatment and uses a Chi machine daily. But it was her discovery of Serrapeptase that has made a dramatic difference to her life.

Says Mrs Rooney: "My MS follows a pattern of relapses and remissions. During the relapses I suffered double vision, stiffness, numbness, loss of balance, loss of bladder control, impaired use of my arms and legs, fatigue, poor concentration, loss of memory

and depression. During one of the relapses, in June 2003, when I had a relapse I started to take Serrapeptase.

At that time I was concerned about one of my little fingers. It had turned white and was curling backward I was terrified, believing it was on its way out. When you have a terrible disease like this you will try anything. I started taking Serrapeptase, taking 9 tablets a day. It has been a Godsend. Within 5 days my finger was back to normal

I now feel brilliant. Everything has improved. Since last June I have had no relapses. The tightness in my spine that indicates the presence of MS has gone, as have the constant pins and needles in my fingers. My balance has improved and what is perhaps

best of all, the old confident pre MS me has returned.

Of course I get tired, but this is because I stretch myself, relying on my new-found energy. I know I am not cured, but the condition is hardly noticeable; so much so that I consider I have not got MS at present. I no longer need the hyperbaric treatments and have given up my slot in favour of someone who needs it. Recently, I went out for a social evening and where normally I would have to leave within 30-60mins, this time my son had to drag me away hours later, as I was enjoying myself so much.

My faith is the backbone of my recovery and I thank God for the little silkworm".

Arthritis and Cholesterol - Mrs Eileen Malone IM2 3HA

Walking was agony for Mrs Malone. The severe arthritis in her knee was so severe and none of the many prescribed medicines she tried had any lasting benefit. By chance she tuned into Dennis the Chemist on her local radio station and heard the name Serrapeptase

for the first time. 'Worth a try' she told herself.

Says Mrs Malone: "I'm so glad I heard that programme. I bought myself a tub and after two weeks the pain lessened. Then I ran out of it and the pain returned. I've been on it ever since. I take 2 in the morning and two in the evening and it has definitely helped me.

Recently I went for blood tests because I am anaemic and it appears that both my blood count and cholesterol levels have improved so maybe Serrapeptase has given me other benefits. I tell everyone about it and I just know I'll go on taking it forever.

Cysts and Cardiovascular Disease - Mr and Mrs Jones LL22 8AP

The couple are spiritual healers and have helped many people with health problems in the course of their work.

One of their clients, who is over 80 years old, suffered a stroke some time ago. The Joneses suggested she try Serrapeptase as an aid to clearing the arteries and sure enough her walking ability improved. Mrs Jones adds: "We were amazed by its power in dispersing two cysts, one on her back and one on her breast. After only three bottles of Serrapeptase the one on her back has completely disappeared while the one on her breast is shrinking. She says she feels wonderful!"

The Joneses have had their own positive experience with the silkworm's secret. About three years ago, Mr Jones had a bad fall. Conscious of his recent hip replacement he took the full impact on his left shoulder which left him in terrible pain.

Mrs Jones takes up the story: "We were going on a coach holiday to Slovenia when this pain really flared up. The doctor prescribed an anti-inflammatory but the side-effects were disastrous and my husband stopped taking them."

Returning to another doctor for a cortisone injection, Mr Jones was told that the problem was not in his shoulder but his arm. At that point, the couple read about Serrapeptase.

"I said to my husband, I'm going to send off for those; I'd rather have £60 less holiday money if you can be pain free. He started taking them 3 weeks before our holiday and the happy ending is that the pain went away and never came back. Now he can swing his arms above his head!"

Having proved for themselves the efficacy of Serrapeptase, Mr and Mrs Jones often suggest it to their clients. And Mrs Jones is an advocate of the low carbohydrate diet prescribed by Robert Redfern.

"It's brought my diabetic sugar levels back to normal," she smiles. "It's amazing!"

WEGENER'S GRANULOMATOSIS

Wegener's Granulomatosis S. Varah, Sheffield

I suffer from a condition called Wegener's Granulomatosis. The condition is a rare form of vasculitis, or inflammation of the blood vessels, that begins in the respiratory system. In this case, the antibodies actually attack the immune system's own white blood cells, causing inflammation of the blood vessels and inflamed tumour-like masses called granulomas, that interfere with blood flow.

My problem is a build up of tissue in my throat just below my vocal chords that

threatens to choke me. This is especially in the winter when I get a mucus build-up that further threatens to choke me when I try to cough it up.

Up until now I have had to attend hospital to have this build-up cut away with a laser every two to six months. A year ago I had an operation and immediately afterwards I found Serrapeptase.

Although suffering from poor health at that time, the Serrapeptase seems to have reduced the scar tissue and avoided the need for another operation or tracheostomy.

Chronic Cough S.T. DONCASTER

Mrs T's persistent cough and colds made her life a misery. She just couldn't shake them off. Preferring 'natural' medicines wherever possible, she favours homeopathy and bio salts.

"Orthodox drugs often have unwanted side effects," she says. "That's why I was interested when someone told me about Serrapeptase. To be honest I am delighted with it. If I have a cold or a chesty cough I find it's completely gone in a couple of days".

"I was interested to learn about its action in dissolving scar tissue and recommended it to a friend who had been suffering with the dreadful pain of sciatica for a long time.

It also helped another friend with severe cystitis. It is amazing that such a simple remedy should be so effective.

Prestwich, Manchester

I'm 70 and was scheduled for bypass surgery. After using Serrapeptase my surgery was cancelled and my doctor told me I had brand new baby arteries.

SERRAPEPTASE QUESTIONS AND ANSWERS

I have abdominal scar tissue 2 years after a lipoplasty procedure. I heard that Serrapeptase could help "dissolve" internal scar tissue. Is there any truth to this?

Yes it is a very effective and safe solution. It will take about 3 weeks to get rid of the discomfort and a further 3-6 weeks to make sure they are completely clear.

As it is 2 years post-op, I do not have pain. Maybe a burning sensation if the scar tissue is massaged,

but that's about it. Do you still think Serrapeptase is effective as the scar tissue is this old? And if so, what doses should I be taking and how often?

Yes, the age of the scar is irrelevant. Dosage really depends upon your finances. I always recommend 3 x 3 to start with and then reduce each week as the symptoms reduce. When symptoms are gone take the lowest dose 1 x 2 per day.

Serrapeptase Questions & Answers continue on the back page...

In the past while suffering even from a simple cold I was close to death from choking from mucus plugs. By keeping the scar tissue down and reducing the mucus I feel Serrapeptase has literally saved my life.

On Monday the 19th of July I got the results of an MRI scan that showed the scar tissue had not returned and I am absolutely thrilled.

"It also helped another friend with severe cystitis.

It is amazing that such a simple remedy should be so

effective"

S.T. DONCASTER

Pain Relief, Inflammation Relief and Clear Arteries!

'The 2nd Gift From

Silkworms is Serrapeptase'

By Robert Redfern

The answers for Pain, Chronic Inflammation and Clogged Arteries. **Clinical use** of Serrapeptase as an anti-inflammatory in Europe and Asia spans over twenty five years.

Good results with: **Pain of any kind**; Arthritis, Rheumatoid Arthritis, Backs etc., **Headaches and Migraines, Lung Problems**: Emphysema, bronchitis, tuberculosis, bronchial asthma, bronchiectasis etc., **Sinusitis and other ENT problems** such as chronic ear infections and runny nose, **Sports Injuries** traumatic swelling and post operative swellings, **Inflammation of any kind**: inflammatory bowel diseases, Crohn's, colitis, **Miscellaneous Conditions**: Cystitis, Fibromyalgia, Internal scars and lesions, Breast Engorgement, Fibrocystic Breast Disease, Enlarged Prostate, Cardiovascular Disease, Varicose Veins and many more.

The amazing Story of an enzyme that is set to become the most widely used health solution because of its ability to replace the majority of anti-inflammatory drugs.

This book details the history, studies, uses and reports by practitioners.

Anti-inflammatory and Natural Chelation

(Horse story, Continued from page 1)

formed, both on the tendons, in the tendon sheaths and in the surrounding ligaments. The prognosis was poor; 'moderate to guarded for anything more than light hacking' said the report.

I had no idea about dose, so had to make an educated guess! I fed him 10 tablets of Serrapeptase a day for 6 weeks, then 6 a day for 2 months, then 3 a day for a further 2 months.

He has just been re-scanned (November 2003). To my delight, the scan showed almost a full recovery. There is minimal scarring on the tendons, and none in the tendon sheaths or ligaments. He is expected to get back to full work now.

I can now bring him back into work. I will increase the work slowly over a period of 2-3 months, and continue on a maintenance dose of Serrapeptase (2 a day) for a while.

This is a truly remarkable recovery, and I am absolutely delighted.

I will be spreading the word!

Liz Hayden

SERRAPEPTASE QUESTIONS AND ANSWERS (CONTINUED)

Will Serrapeptase help Irritable Bowel Syndrome?

Serrapeptase will remove dead tissue and inflammation from the digestive tract, thereby relieving the symptoms. There are, however a number of causes of IBS and for example some people benefit from hypnotherapy. Follow the plan in my book for best results.

My research indicates that Serrapeptase is destroyed by stomach acid and therefore needs to be enterically coated. Do you have research that shows otherwise?

No, I recommend enteric-coated tablets and enteric-coated granules in capsules for the best delivery.

I have osteo-arthritis. I am taking Vioxx, 25mg, daily for inflammation. Also taking 1500mg Glucosamine, 1200mg Chondroitin, and 3gm MSM, will Serrapeptase help?

Serrapeptase is extremely effective in removing the inflammation, without the side effects associated with drugs. Once the inflammation has gone then the body's own recovery systems can then start to rebuild, with the help of Glucosamine, Chondroitin, MSM and collagen.

What is the Clinical usage of Serrapeptase in children, with dosage precautions and other relevant clinical information?

It can be safely used with children. I recommend 1-3 tablets per day for children. If they cannot swallow the tablets, they can chew the tablet as it does not have any taste. (also capsules that can be broken open and mixed with honey). In fact a sore throat can be cleared in about 30 minutes by chewing 1-2 tablets. Our grandchildren use it when they get mucus problems from colds, with fast results.

Wondering if Serrapeptase has ever been used for

Peyronie's Disease (curvature of the penis)?

I have been asked this a few times but I have not had any feedback. It could work as the growth that causes it should diminish with Serrapeptase. I look forward to feedback on this matter.

Please can you tell me if I give Serrapeptase to my Dalmatian dog how many tablets can I give him. Also can it help for inflamed skin which occurs because of a small infection in the hair follicle which makes the skin swell into a lump which looks inflamed?

It is well worth trying; 1-3 per day should be sufficient.

Does Serrapeptase help with lung problems fungus?

No, just the inflammation that may result from the fungal infection. Try colloidal silver in a nebuliser mixed 50:50 with 3% hydrogen peroxide.

I am on Warfarin, is it safe to take Serrapeptase?

Yes it is perfectly safe and if you follow my cardiovascular plan you may not need the Warfarin. Healthy people do not need drugs.

Can I take Serrapeptase whilst I am pregnant?

Yes you can take it pre and post natal.

Why do doctors not prescribe Serrapeptase if it is so good?

They do, in the better medical systems such as Germany and other countries with superior results compared to the UK and the USA. They have prescribed it for the last 25 years.

Can it get rid of my varicose veins completely?

It can get rid of the discomfort and the swollen veins (ask my grateful wife). It cannot repair damaged valves.

How long has Serrapeptase been in use?

Around 25-30 years.

My son has Crohn's Disease, he is 10 years old.

Can he take these tablets and how many?

He can take any amount as they are quite safe. I would try 3 per day to begin. He also needs to follow the recovery plan to resolve it (see one in the book 'Pain relief, Inflammation Relief and Clear Arteries').

I will be having ACL surgery and would like to use this enzyme in my recovery. I am somewhat familiar with enzymes from the book 'Enzymes for Autism' which I am utilizing, successfully for my son diagnosed with PDD-NOS.

Serrapeptase will certainly help in your post-op recovery.

I have gallstones and a stomach ulcer. Would Serrapeptase aid recovery?

Not for the stomach ulcer, and it may cause discomfort. You need to use a special formula to heal the ulcer first before you deal with the gallstone. If you want a plan please contact me.

My granddad is diabetic but would like to try this product for a number of things listed. Can he take this medication with being diabetic? and what ingredients are used to make Serrapeptase please?

Yes he can take it as a diabetic and with the drugs he is taking. The contents are just Serrapeptase enzymes. Reports for diabetes users tell of balanced blood sugars but I cannot tell if it is the Serrapeptase or the fact they are cutting back on starchy carbohydrates.

My husband has nasal polyps and is about to go into hospital for the third time to have them removed. Will this product help him?

It should do; it gets rid of other cysts. I cannot say how long it will take and so he can use them immediately he comes out to prevent the return of the polyps.
